

50 112 varnish for water-colours

product name:

- Varnish for water-colours.

contains:

- Polyvinyl resin, UV-absorber, ethanol.

basic information:

- Varnish for technical water-colour proceedings for protection against humidity and dust based on a high-quality synthetic resin solved in alcohols.

characteristics:

- Colourless
- very fast drying
- non-yellowing and age-resistant.

handling:

- Shake well before use.
- *Varnish for water-colours* is ready to use, but can be diluted with *alcohol / ethanol*.
- Product should be applied with a special fixative diffuser.
- Please clean tools as soon as possible with *alcohol / ethanol*.
- The product is based on "alcohol" and cannot be mixed with those based on "mineral spirit".
- The level of gloss depends in accordance to absorbance of the surface, painting technique and the thickness of the film.
- The subsequent fixing of the surface of a picture produced using materials low in binding agents, like water-colours or gouache colours, may cause the colour shade to become significantly darker. Using too much varnish frequently causes a loss of "lightness". The product also may makes the support, for example the paper, more transparent.
- The varnish coats normally used in practice give no special UV protection to the paints used! For this reason, we recommend that you use high-quality and lightfast artists' paints from the outset as far as possible.
- For the ideal protection of water-colour paintings we additionally recommend using special glass for frames.
- Close immediately after use.
- Store in a cool and dry place.
- Individual pre-tests are required (see footer).

product labeling:

- Please refer to the individual safety data sheet on our website www.schmincke.de.
